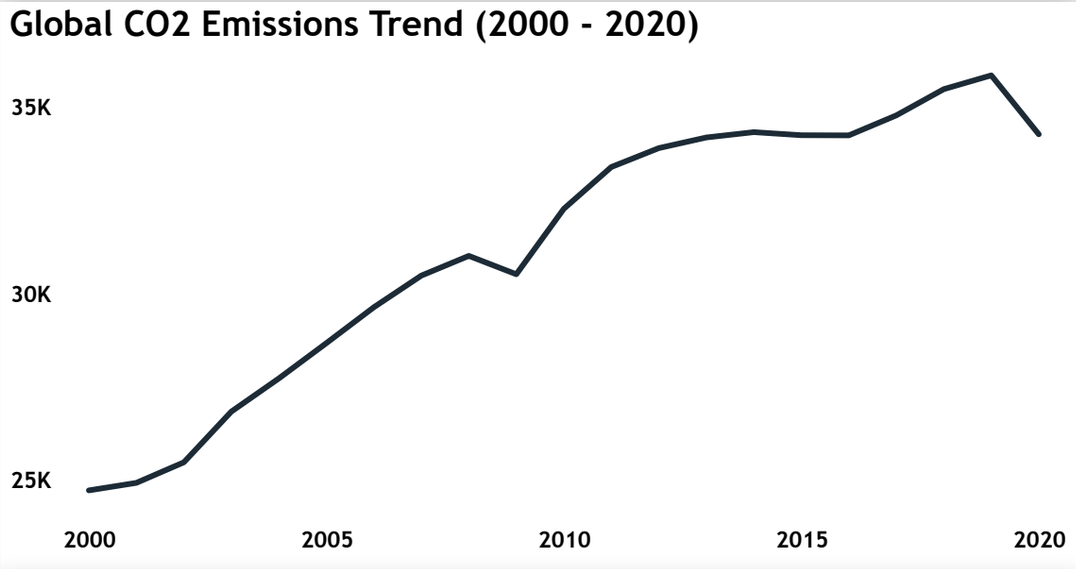
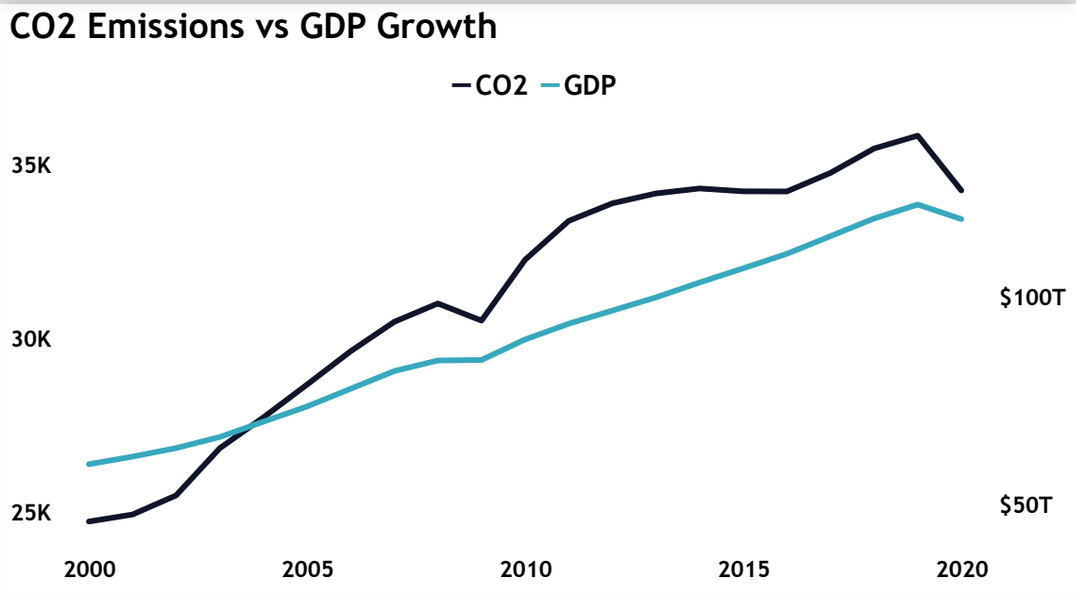
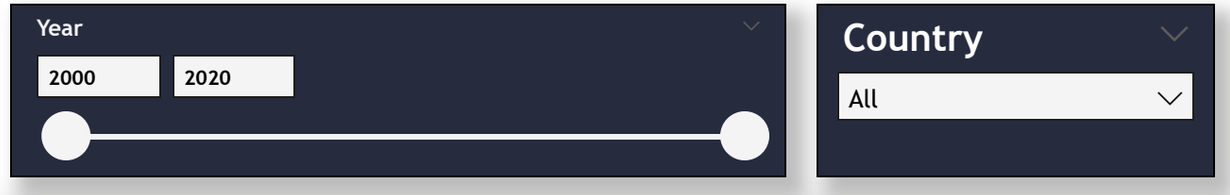
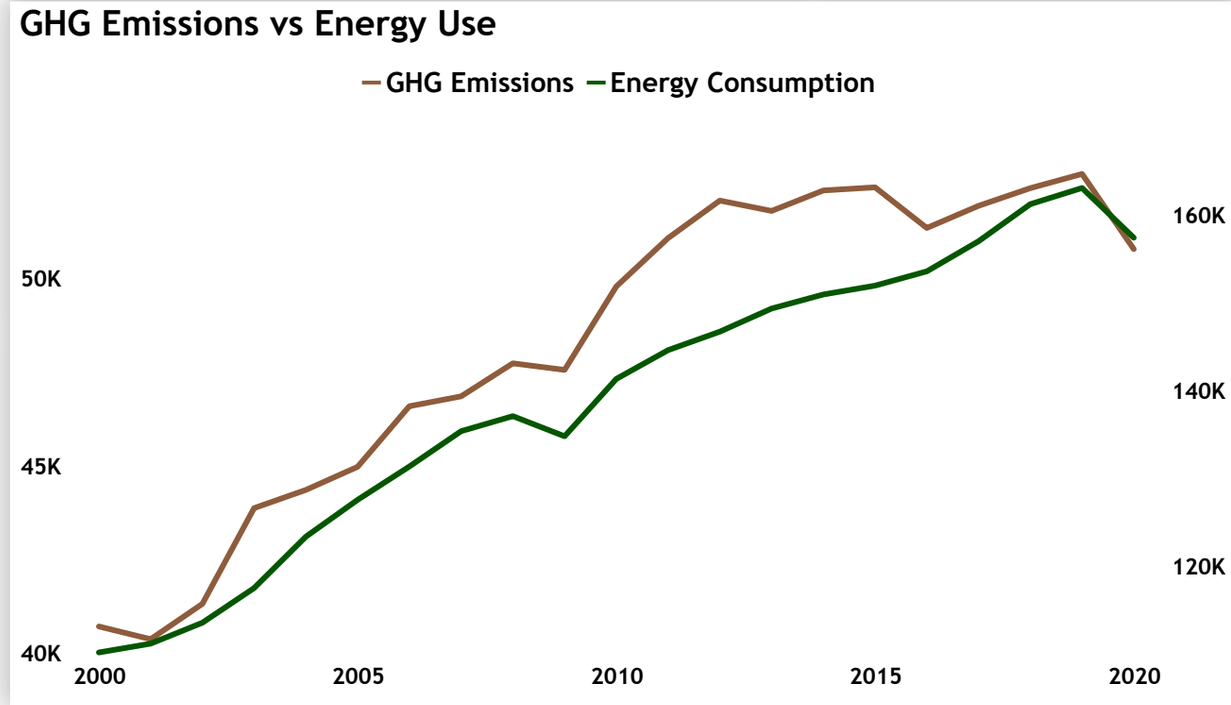
TRENDS IN CO_2 AND GREENHOUSE GAS COMPOSITION









This page highlights global CO_2 emissions trends, compares emissions with GDP growth, and shows how greenhouse gas levels relate to energy use over time. It helps show how economic activity and energy consumption shape global emissions.

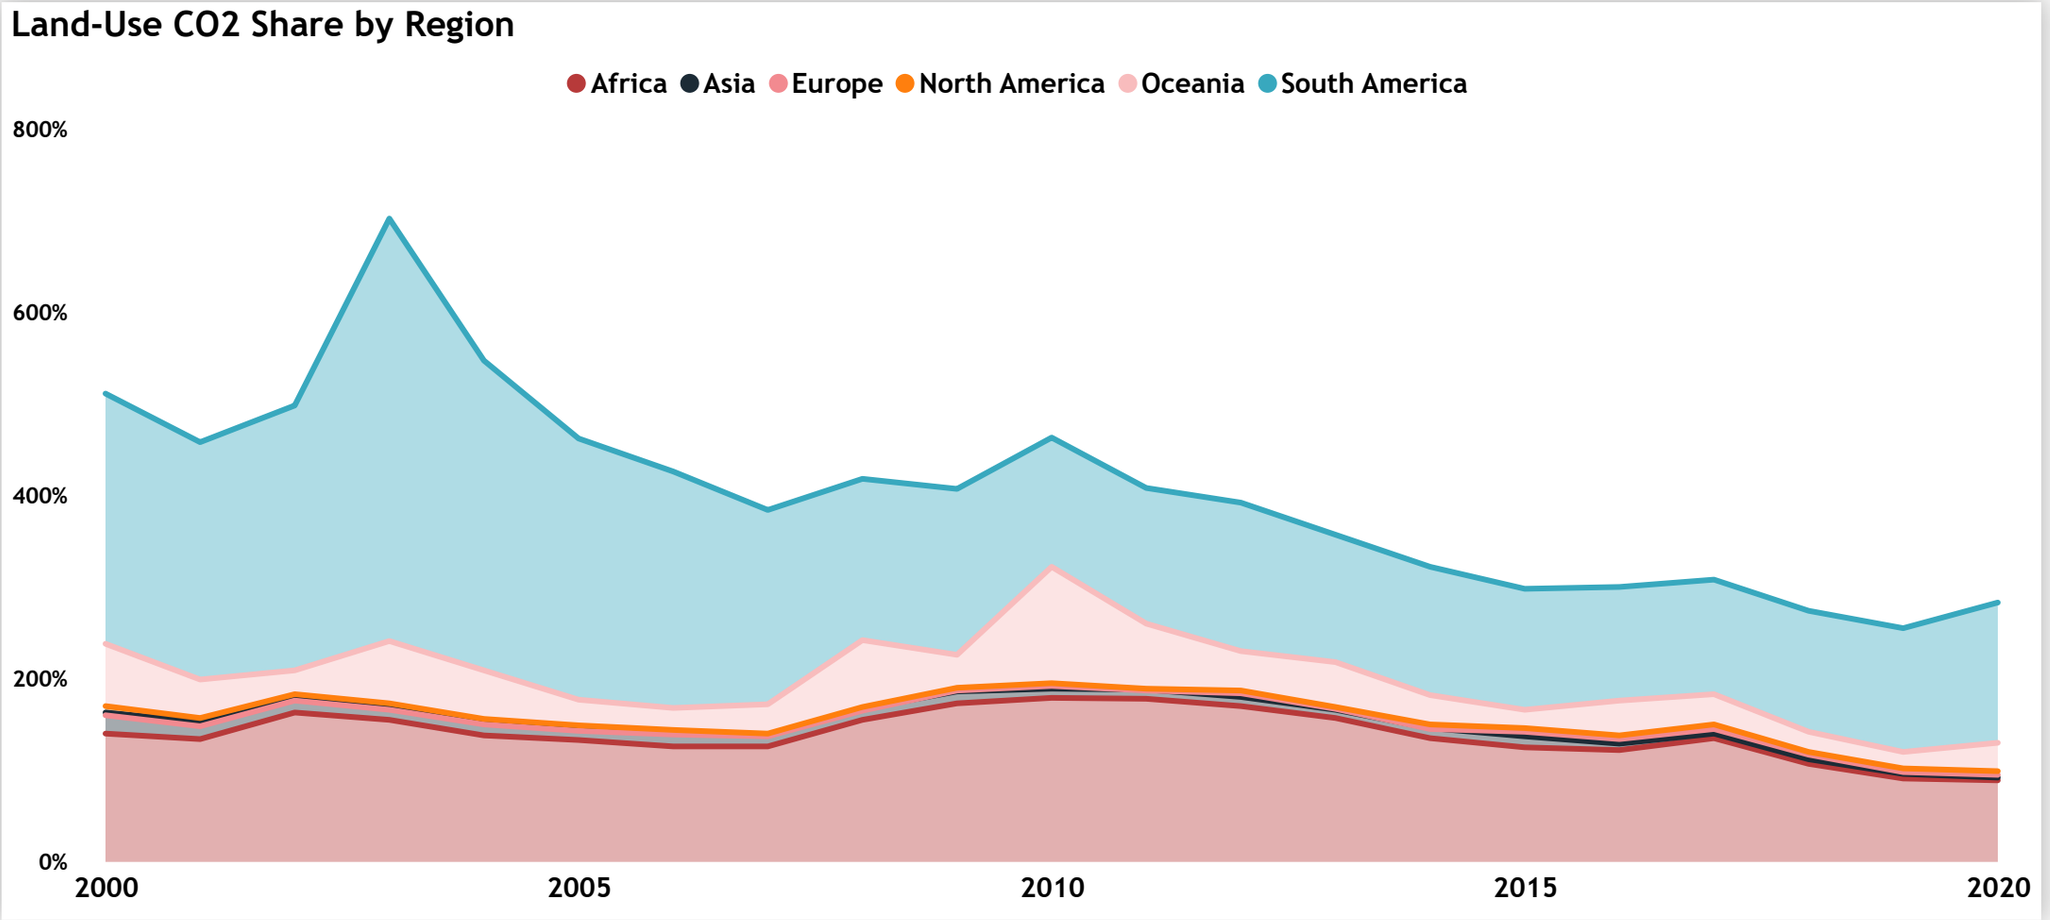
CO_2 EMISSIONS FROM LAND USE CHANGE BY REGION



This chart shows the share of CO_2 emissions attributed to Land Use Change across regions from 2000 to 2020. A high percentage indicates Land Use Change (like deforestation) was a major driver of emissions in that year.
